

### 3 main problems

- 1) pure knowledge of corridors and habitat suitability,  
to map, ensure and improve corridors
- 2) lack of conflict management
- 3) no effective communication and cooperation of source populations

### Main gap knowledge

weak data transfer among stakeholders and NPs  
no quick, adaptive and regular monitoring of occurrences (snowtracking is not enough)  
weak knowledge of coexistence - traditional knowledge is lost (pastures)

Experiences former management plan  
No synchronisation with other sectors  
Scaling: to small areas and short time

coming together:  
conservation plan instead of management plans

cooperation in the methodology improvement and database (like EURODEER)

Main aims and topic:  
elaborate

- system of coordinated work
- determine priorities that are diverse and flexible
- conflict solving among partner countries
- ways and techniques of responsibility control
- stabilise populations in suitable habitats
- ensure connectivity
- encourage local government to improve national plans

responsible: hungarian government

monitoring of national measures and feed back is necessary
