CARPATHIAN CONVENTION
WORKING GROUP ON SUSTAINABLE TRANSPORT

State of the Art report

Budapest, Hungary

Cristian-Remus Papp
WWF Romania

17th May 2018
Report on "State of the Art" and Gap Analysis in the field of Environmentally-Friendly Transport Infrastructure Development
Why is the report important?

• Prepared as a need to present an up-to-date overview of the current level of knowledge, information and practices in the field of environmentally-friendly transport infrastructure development in the different countries of the Carpathian Ecoregion.

• It is also summarizing the actual level of knowledge and information related to the topic of ecological connectivity and its preservation in the Carpathians.
Approach

- National reports:
  - Czech Rep.
  - Hungary
  - Romania
  - Slovakia
  - Ukraine
  - + Poland
  - + Serbia

- Regional report: Carpathian

Project co-funded by the European Regional Development Fund (ERDF).

1. Introduction ........................................................................................................................................5
  1.1 General Context ..................................................................................................................................5
  1.2 To whom is the report addressed? ......................................................................................................6
2. Legislative context ..................................................................................................................................6
  2.1 European Directives and strategies, relevant conventions .................................................................6
    2.1.1 EU Nature Directives (FFH, BD) and the Biodiversity Strategy ..................................................6
    2.1.2 Transportation Directives (road and rail) .....................................................................................8
  2.2 Carpathian Convention .......................................................................................................................12
  2.3 ESPOO Convention ............................................................................................................................13
  2.4 National legislation in the field of nature protection and transport infrastructure development .. 14
  2.5 Environmental procedures ................................................................................................................16
    2.5.1 SEA procedure ............................................................................................................................16
    2.5.2 EIA procedure .............................................................................................................................17
    2.5.3 AA procedure .............................................................................................................................17
3. Key Ecological Aspects .................................................................................................................. 18
  3.1 Ecological connectivity, networks and corridors ........................................................................... 18
  3.2 Role and importance of ecological corridors for animal movement and/or dispersal ................. 20
  3.3 Main threats to ecological connectivity .......................................................................................... 21
  3.4 Effects of road infrastructure on biodiversity ................................................................................. 21
4. Status of ecological corridors in the project area ................................................................................. 22
  4.3 Ecological corridors in Romania - status of identification (including the existence of a methodology), protection and management ..................................................................................... 22
5. Status of the road and railway network development in the project area ........................................... 24
  5.3 Status of the road network and railway development in Romania- map with the existing infrastructures, length, density, plans for developments in the next 5 years ................................................... 24
6. Effects of current road and rail transportation on ecological corridors in the project area ............... 24
  6.3 Effects of current road and rail transportation on ecological corridors in Romania- overlaps between transport infrastructures and ecological corridors, barrier effect and habitat fragmentation, disturbance .................................................................................................................. 24

Project co-funded by the European Regional Development Fund (ERDF).

www.interreg-danube.eu/transgreen
7. Planning of highways and railways in the project areas ................................................................. 24

7.1 Minimizing Fragmentation through Appropriate Planning ....................................................... 24

7.4 Planning of highways and railways in Romania - practices including environmental assessments, stakeholder consultation and involvement processes, decision making ........................................... 24

8. Avoidance, mitigation and compensation ................................................................................... 25

8.1 Avoidance of habitat loss and fragmentation ........................................................................... 25

8.2. Existing mitigation measures .................................................................................................. 27

8.3 Evaluation and monitoring of the efficiency of the mitigation measures ................................ 28

8.4 Existing compensation measures ............................................................................................ 28

9. Best practice examples of sustainable transportation development in Europe ........................... 29

9.3 Best practice examples of sustainable transportation development in Romania ..................... 29

10. Negative examples of transportation infrastructure development in Europe ........................... 29

10.3 Negative examples of transportation infrastructure development in Romania .................... 29

11. Gaps of available knowledge, accessibility and availability of biodiversity and transport data .... 29

12. Recommendations to fill in the gaps ....................................................................................... 29

13. Conclusions .............................................................................................................................. 29

References ......................................................................................................................................... 29
Relation with other deliverables/ projects

• Carpathian Handbook on sustainable transportation

• State of the Art – ConnectGREEN

• Providing gaps to be filled in by other projects
Status

• National reports:
  - Czech Rep. – work in progress
  - Hungary - drafted
  - Romania - drafted
  - Slovakia - drafted
  - Ukraine – work in progress
  - (+ Poland - drafted
  - + Serbia – drafted)

• Regional report: Carpathian – work in progress
Next steps

• Finalise all country reports – end of May

• 1\textsuperscript{st} draft of the regional report drafted by 15\textsuperscript{th} of May

• Finalise the regional report by 30\textsuperscript{th} of June 2018

• Promotion at national and regional levels
Thank you!
