Topics for this slot

1. Presentation of the Connectivity Guidelines

2. What are the topics of the current Guidelines you find important to be included in practical Guidelines?

3. What would you like to see included in the NaturaConnect Learning Platform Module?

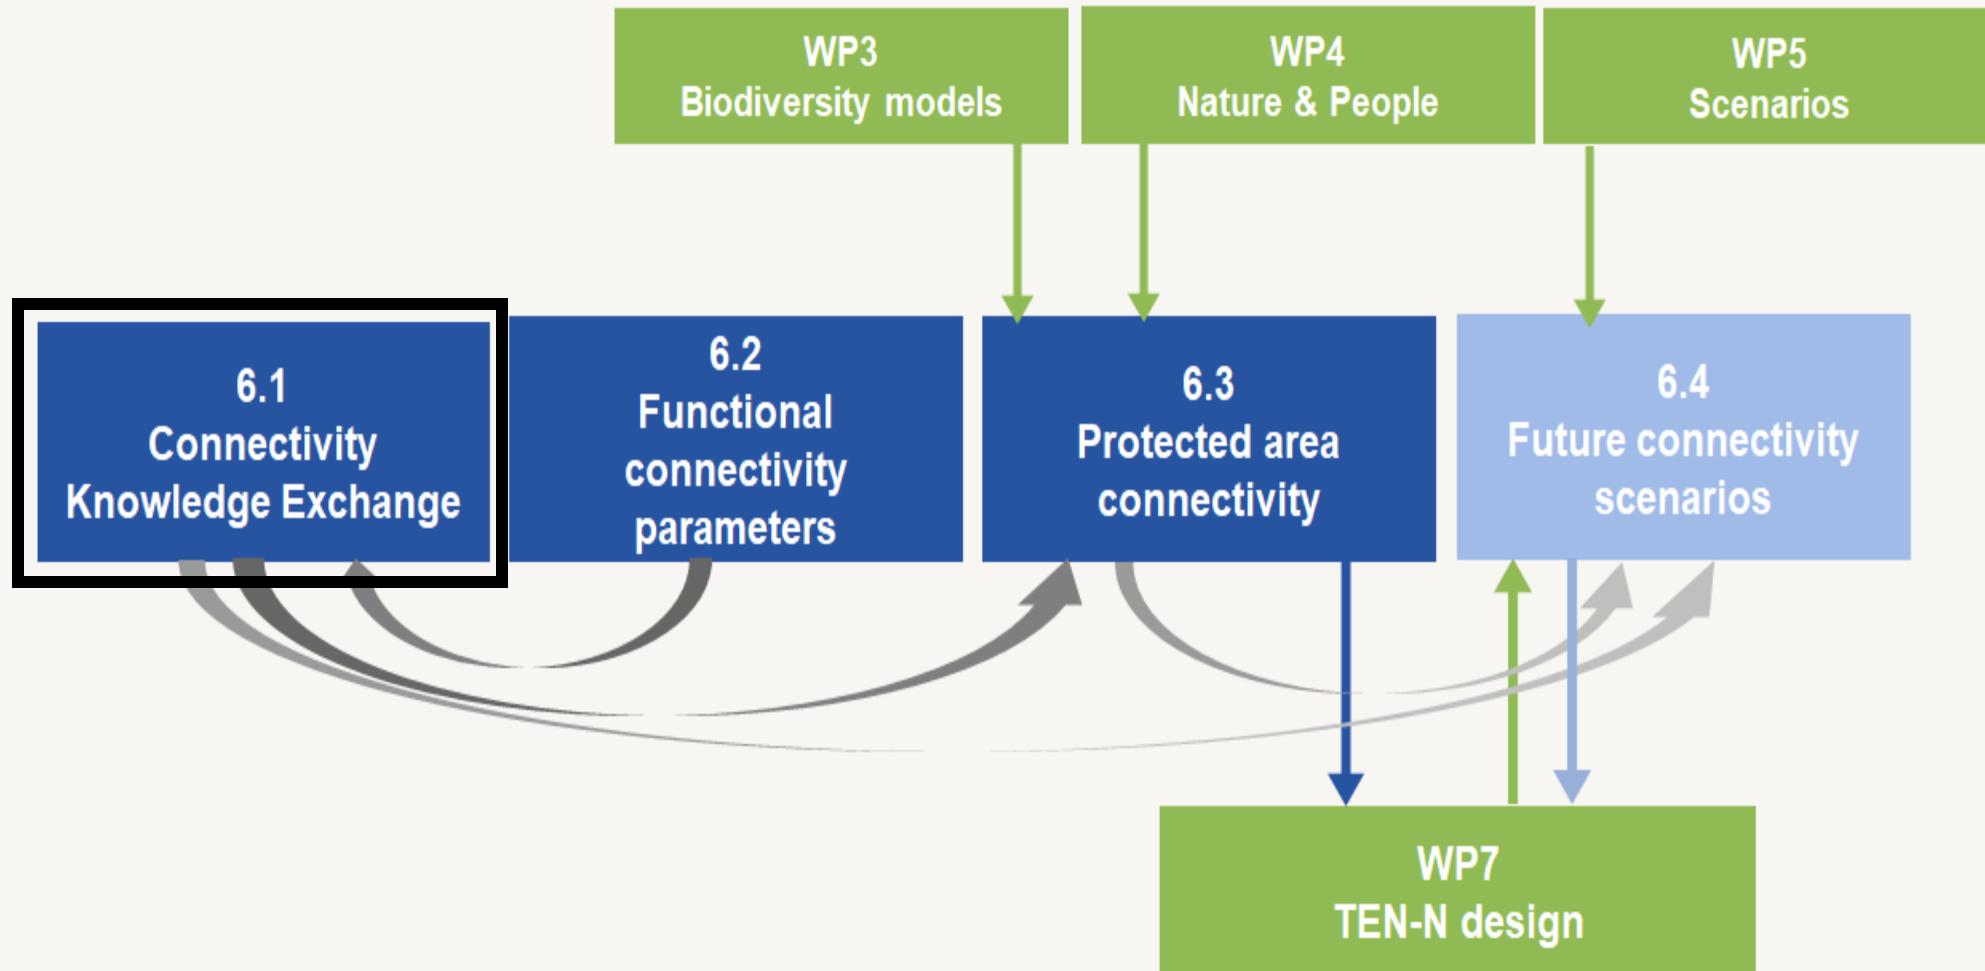

© WWF CEE

WP6: Multi-scale nature connectivity and corridors design

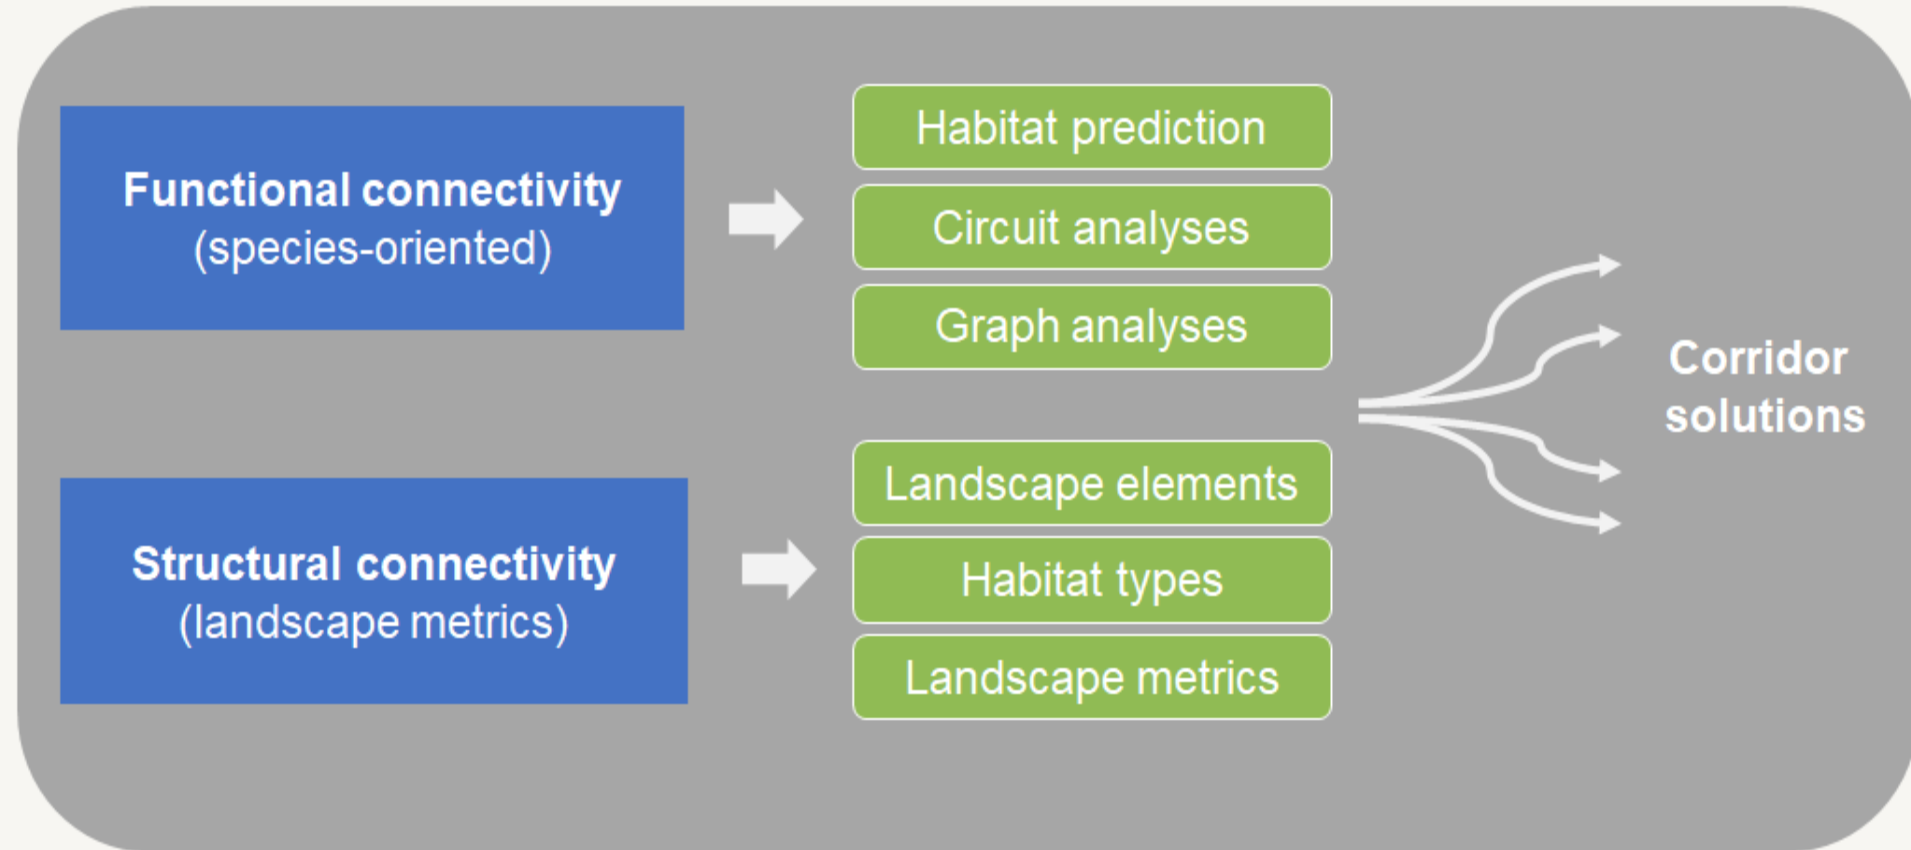

- Identify ecological and landscape elements and planning instruments defining **ecological corridors across scales**.
- **Develop** a coherent methodological framework and **guidelines for mapping** structural and functional **connectivity** at the European scale.
- Support **adaptation policies** by identifying opportunities to establish connectivity in conservation and restoration plans under different **climate and land-use change scenarios**.

WP6 Flowchart

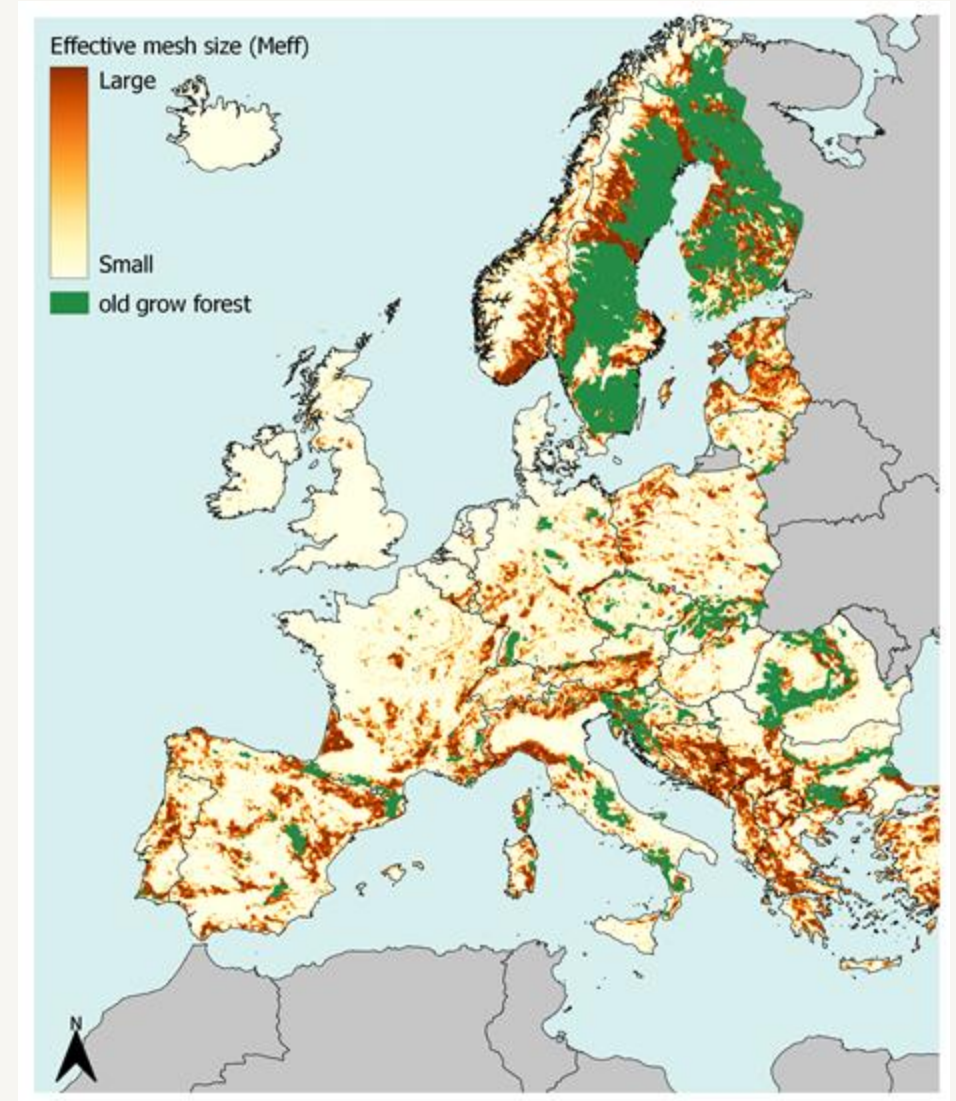

© WWF CEE

Corridors design

Structural connectivity analysis

- Development of analysis pipeline for assessing structural connectivity metrics
- **Data:**
 - Binary habitat maps and/or fragmentation
 - Layers containing information for patches within the fragmentation map, dependent on which connectivity metric is used
- **Moving window:** neighborhood-analysis at 1-km resolution across Europe

Connectivity probability (effective mesh size) of forests containing old-growth forests

Functional connectivity analysis

Covariate Estimation

- Proportional land covers
- Max. Temp.
- Terrain Ruggedness Index (quadratic)
- Roads density

Species Distribution Modelling

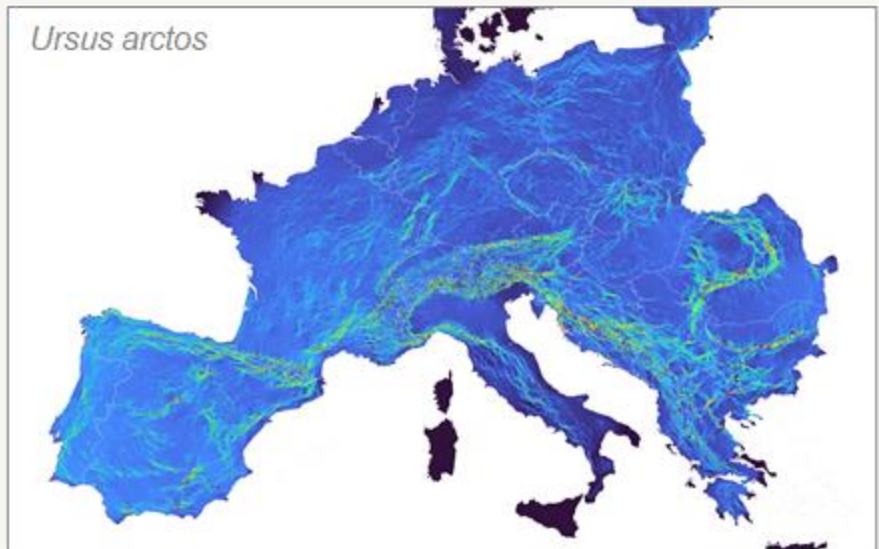

- Mammals Rewilding Data
- Generalized Linear Mixed Model
- Random effects of biogeographic region

Resistance surface and focal nodes

- SDM inverted for resistance surface
- Negative exponential transformation
- Nodes derived from Natura2000 sites > 150km²

Circuitscape 5 Analysis

- Model ~2,000 trans-European circuit connections
- Normalize circuit densities by flow potential
- Final predictions at 1km² and 10km²

The guidelines for connectivity conservation and planning

Connectivity guidelines

The **Connectivity Guidelines** provide spatial and land use planners with tools for planning ecological connectivity

naturaconnect.eu/guidelines-for-connectivity-conservation-and-planning-in-europe/

Connectivity guidelines

- The document is very comprehensive
 - Based on the Guidelines, the NaturaConnect Team will develop
 - **hands-on Guidelines for practical use**
 - **a module on ecological connectivity**
- at the NaturaConnect Learning Platform**

naturaconnect.eu/guidelines-for-connectivity-conservation-and-planning-in-europe/

Connectivity guidelines

We are interested in the **Carpathian Convention Stakeholders' opinions**, to integrate into practical Guidelines and the NaturaConnect Learning Platform Module on ecological connectivity for capacity building

Welcome to the NaturaConnect Learning Platform.

This is the capacity building hub of the NaturaConnect project. Here, you find different training modules created by project partners that help to improve professional capacity to design and implement the Trans-European Nature Network (TEN-N).

Review: Guidelines for Connectivity Conservation Planning in Europe

Thank you for participating in this review. You can access the **Connectivity Conservation Planning Guidelines** [here](#). The guidelines will be revised based on all the feedback received through this questionnaire and your name will be listed as a reviewer if you agree. Furthermore, the survey will help us identify interests and needs for capacity building. We plan to address these needs in training modules on the future NaturaConnect Learning Platform.

We warmly invite you to join the [NaturaConnect Stakeholders Community](#) before or after completing your review. This way, we will keep you updated about NaturaConnect results and opportunities for engagement. It also facilitates recording your contributions to this review.

You do not need to answer all the questions. For example, if you have read only specific sections, feel free to comment only on those. You are also welcome to return and complete the survey after reviewing new sections or the entire document. At the end of the questionnaire, you will be able to provide comments that may not fit in any of the sections.

Thank you for taking the time to share your feedback as we work to enhance the guidelines.

Best regards,

The NaturaConnect Team

Connectivity guidelines: target audience

- **Practitioners** and **scientists** designing and managing nature conservation and restoration projects
 - **Public administrations, planners** and **managers** within and outside protected areas, private initiatives, foundations, etc. interested in connectivity planning.
- **Tailored to meet the needs of those responsible for developing and implementing strategies, policies, and management plans.**

**Assessing Ecological Connectivity in Europe:
Conservation Goals and Information Gaps**

NATURA CONNECT
Funded by the European Union

naturaconnect.eu

NATURA CONNECT

Survey of ecological connectivity projects in Europe

The NaturaConnect project (<https://naturaconnect.eu>) is an EU-funded Research and Innovation action that develops knowledge, tools, and capacity- building to support the implementation of a coherent network of protected areas across Europe - the Trans-European nature network (TEN-N). The present survey aims to collect information on ecological connectivity projects in Europe undertaken at Regional to National and Pan-European levels. Projects may include public and private conservation action plans and strategies, connectivity conservation and restoration measures, research and innovation projects, etc. The inputs will be used to produce a public repository of connectivity projects that can support knowledge sharing.

Country or countries of application: Czech Republic, Slovakia

The project is aimed on conservation of large carnivore populations in the edge of their western distribution in the Carpathians. Activities contain detailed monitoring of wolf, lynx and bear population density and other demographic parameters, research of movements across urbanized landscape, identification of critical sections of wildlife corridors, dealing with local authorities, participation in decision making processes and spatial planning, and in some cases also practical realization of wildlife corridors (e.g. planting of forest patches as stepping stones in wildlife corridors).

Tools and data sources for modelling connectivity

Tools and data sources for modelling connectivity

- i. Least-cost path and resistance kernels
- ii. Graph theory
- iii. Circuit theory
- iv. Agent based models
- v. Structural connectivity metrics and moving windows analysis
- vi. Assessing ecosystem services

Tools and data sources for modelling connectivity

- The most common modelling families for functional and structural connectivity (Table 5.1 in the guidelines)
- List is not exhaustive but demonstrates some of the possibilities with these models

Model Family	Data Needs	Applications	Software & Packages
<i>Least-cost Path & Resistant Kernels</i>	Resistance surface, focal nodes, and species dispersal data (RK)	Focal species corridors, population dispersal potential, area of potential use, pollinator movement, probability of human movement	LCP: ArcGIS Tools, QGIS plugin, R packages ('gdistance', 'leastcostpath'); RK: UNICOR
<i>Graph Theory</i>	Focal nodes & connection file of attributes between node pairs	Analysis of landscape structure and potential functionality, prioritisation of patches and connections, long-term population persistence	Conefor, ArcPro Network Analyst, R packages ('iGraph', 'riverconn')
<i>Circuit Theory</i>	Resistance surface & focal nodes (Circuitscape) or source weight surface (Omni)	Focal species connectivity and pinch points, water flow, pollinator movement, invasive species control	Circuitscape, GFlow, Omniscape, Linkage Mapper (multi-family)
<i>Agent-based models</i>	Model specific: Focal node and network data, survival rate, population growth rate, fecundity, node transition probabilities, resistance surface, etc.	Long-term population persistence, patch and connection importance, source-sink analysis	MetaIPM, HexSIM, NetLogo, R packages ('p SiMRiv')
<i>Structural Connectivity Metrics</i>	(Will differ depending on the used metric(s)) Number of patches, patch size(s), boundaries and perimeter, distance between patches, focal nodes, presence/absence of links, number of paths.	Assessing connectivity of select components in the physical landscape, e.g. protected areas, specific habitats and/or corridors. Both in relation to intra- and inter-patch connectivity.	Conefor, ArcPro Network Analyst, R packages ('iGraph', 'riverconn', 'gdistance')
<i>Spatial prioritisation tools</i>	Study area planning units layer, biodiversity distributions, land cover/land use, current protected areas, etc.	Identifying structural connectivity via prioritisation of landscape elements and systematic conservation planning	Marxan, Zonation, R packages ('prioritizr')

A framework for connectivity conservation and planning

A framework for connectivity conservation and planning

A framework for connectivity conservation and planning

While the framework is presented linearly, it should be an **iterative process** due to the continuous need to **engage and collaborate with stakeholders** to ensure the most accurate and useful plan is produced

A framework for connectivity conservation and planning

1

Scoping and problem assessment

Identify all key stakeholders

Assess priorities, data gaps and management questions

Establish collaboration team

- Practitioners
- Scientific research
- Communication
- Policy makers

Assess threats, possible actions and likely impacts

Assess priorities, data gaps and management questions

Set general spatial extent

A framework for connectivity conservation and planning

Setting objectives

Define specific objectives and targets

Assess priorities, data gaps and management questions

General objective requirements

- Appropriate corridor width
- Structural configuration requirements

Final spatial extent and resolution of the analysis

A framework for connectivity conservation and planning

3

Analysis selection and data preparation

Identify appropriate connectivity model or metric

Land use patterns

Potential barriers

- Dam locations
- Linear infrastructure
- Major water features

Connectivity opportunities

- Existing habitat patches
- Potential & existing movement corridors
- Natural features
- Cultural features

Stakeholder engagement

Acquire expert knowledge on missing features

A framework for connectivity conservation and planning

4

Assessment of connectivity

Conduct connectivity analysis

Prioritize corridors & stepping stones for conservation or restoration

- Corridor width & configuration
- Assess fine-scale conditions in proposed corridors

Present draft results to stakeholders

- Iterate new models after comments

A framework for connectivity conservation and planning

5

**Implementation,
monitoring and
evaluation**

**Organisational
roles &
responsibilities**

**Establishment
of landscape
designations**

Land management

- Habitat restoration
- Human use & development

**Monitoring &
evaluation**

- Species movements
- Evaluating indicators

A framework for connectivity conservation and planning

While the landscape characteristics, focal species or conservation objectives of each connectivity project can be different, these **steps provide a foundation for designing a connectivity network that may effectively facilitate ecological connectivity**

Which topics do you
find important to be
included in practical
Guidelines?

What would you like
to see included in
the NaturaConnect
Learning Platform?

The NaturaConnect Learning Platform

Welcome to the NaturaConnect Learning Platform.

This is the capacity building hub of the NaturaConnect project. Here, you find different training modules created by project partners that help to improve professional capacity to design and implement the Trans-European Nature Network (TEN-N).

europeannatureacademy.com/course/naturaconnect

The NaturaConnect Learning Platform

<https://tinyurl.com/ENA-NC>

NaturaConnect Training Course.

This **self-paced course** includes sequential and stand-alone modules aiming to improve conservation planning. The materials and activities empower users to utilise the NaturaConnect outcomes and effectively create stakeholder engagement across various scales. Amongst other topics, participants can learn about the policy context of the TEN-N, comprehend specific tools and methods used in spatial conservation planning, and be enabled to apply them in various contexts.

Section 1 - Concepts

Background information.

Modules

- 1.1. Trans-European Nature Network (TEN-N)
- 1.2. Cross-sectoral Policy Frameworks
- 1.3. Nature Futures Framework (NFF)
- 1.4. Connectivity Conservation**
- 1.5. Integrated Spatial Planning

Section 2 - Governance

Processes and instruments.

Modules

- 2.1. Stakeholder Engagement
- 2.2. Financial Instruments

Section 3 - Technical Tools

Project outcomes.

Modules

- 3.1. Biodiversity Modelling
- 3.2. Scenarios on Land Use and Climate Change
- 3.3. Connectivity Analyses**
- 3.4. Spatial Planning for Protected and Restoration Areas
